

Environmental Policy

Compass Windows & Doors recognise the importance of protecting our environment and we are fully committed to operating our business in a responsible manner. We are dedicated to reducing our environmental impact throughout our office, our manufacturing departments and the wider organisation.

We manufacture quality window and door products with minimal impact on the environment through the materials we use and the like-minded organisations we choose to work with.

The timber in our windows and doors are sourced from sustainable & managed forests and we proudly hold an FSC Chain of Custody certification. Our timber products are fully factory-finished with a four-stage automated painting process using water based paint – an environmentally friendly alternative to solvent based paint.

Our window and door products are designed to be highly weatherproof and energy efficient, meaning they are an environmentally friendly option in any home or business. Once our products have reached the end of their life, almost all of them can be completely recycled.

At Compass, we will constantly work to improve the effects we have on the environment through the following;

- Assessing/reassessing our activities and how they impact the environment
- Reducing the level of waste, we produce
- “Think before we print” – reducing the volume of paper we use to print documents
- Reduce our energy consumption/wastage where possible
- Provide training for our staff on environmental issues
- Use recyclable materials where possible

This policy will be reviewed annually
